

PolyRoller630

Weldpoly PolyRollers are designed and manufactured in Australia, specifically for use with HDPE / poly pipe. Cut, welded and assembled by us in Melbourne then hot-dipped galvanised, these are not a throw-away product. The centre-line of the rollers changes to help the weld bead go by. Rollers are real, heavy-duty rollers, not a piece of pipe spinning on bolts. Handling has been considered with eye-bolts for the loader and handles for safe movement.

TECHNICAL SPECIFICATIONS

Suits HDPE / polypipe from 110mm (4") to 630mm (24")

Australian designed and manufactured, hot-dip gal with H/D rollers on replaceable bearings.

Adjustable centreline height, using H/D chain lock

Weight 90kg
